

Comments on the Final Exam in MSCF Probability, August 2021

The exam will be on Monday, August 23, from 9:00 AM to 12:00 PM ET.

If you are able to take the exam in person, on campus in either Pittsburgh or New York City, then you are expected to do so. If you must take the exam remotely, then you will be required to utilize proctoring software that we will be providing. There will be further information on this soon. **Regardless of where you take the exam, you must take the exam during the scheduled time.**

Please plan to start the exam on time. Starting the exam late does **not** entitle you to extra time on the exam. I reserve the right to not allow a student to start the exam after 9:15. You will have to stop at 12:00 regardless of when you start.

You will find two old exams on Canvas. You may notice some overlap between previous exam questions and exercises from this year. You should **not** interpret this to mean that you can expect exercises from this year to appear on this year's exam. I usually do not (intentionally) give you exercises on the exam that you have already done during the course.

I have posted versions of the past exams with answers. Please note that "answers" are not fully worked out "solutions." **You need to provide fully worked out solutions on your exam.**

You are allowed one sheet of notes. This means **both sides** of **one** 8.5" by 11" sheet of paper. It is fine to collaborate with other students in preparing a note sheet. It is also fine to photocopy a note sheet. There are no restrictions on what you can write on the note sheet, **BUT the notes must legible to me.** This means that you **cannot** use writing/printing that is smaller than what I am able to read. This is not a competition to see who has the best eyesight.

You must submit your note sheet in advance of the exam, in order for me to approve it. This will be done via an "Assignment" which will be posted on Canvas. You will submit your note sheet in the same manner that you submit homework assignments. The deadline for submission of the note sheet will be 11:59 PM ET on Sunday, August 22.

The exam will include the table of distribution facts, and the "Useful Math Facts" sheet. These are available on Canvas, and are also included in the past exams.

Other than the notes listed above, you will **not have any access to notes, books, or computational tools, including a calculator.** You can leave your answers in the forms specified in the instructions; a calculator is not needed.

Keep in mind that the exact content of the course varies from year to year, so the past exams may not be exactly representative of the material covered on our exam. You should understand everything that was covered in lecture, and in the exercises. It all could appear on the exam.
